Streamlined order fulfillment

With the explosive growth of e-commerce, order fulfillment and distribution facilities require a strategy for meeting a demand that is expanding quickly. A key part of this strategy includes choosing the right packaging system for the job. With over four decades as a packaging solutions leader, PAC Machinery has the proven experience required to manufacture versatile, dependable packaging equipment and materials designed specifically for the online and multi-channel fulfillment industries.

Solutions for every size of business

PAC Machinery designs and manufactures a broad range of equipment solutions that will prove essential to any size operation – from small-scale start-ups through multi-line, high production facilities. Whether production demands are high or low, the key requirement is to attain dependable equipment that you can rely on shift after shift and day after day. When performance is critical, versatile systems from PAC Machinery deliver a dependable means to achieving your production goals - and at the same time reduce your labor costs.

Every system we design reflects the needs of our customers. Our Rollbag, Magnum, and Speedpack automatic baggers require very little space and fit seamlessly into existing production environments. Our next bag out printing feature eliminates the requirement for a separate shipping label. Simply scan the item and the shipping information is printed directly on the bag. Next, place the item into the pre-opened bag. The bag is then sealed automatically, separated from the roll, and the next bag is indexed into position for printing, loading and sealing. Fast, easy, seamless.

Automatic bagging, printing and sealing

Rollbag R1285 Velocity Bagger

The Rollbag R1285 Velocity automatic bagger delivers exceptional value, speed, and flexibility. With pneumatic operation, the Rollbag Velocity is the fastest tabletop automatic bagger in its class. Touchscreen programming provides a flexible solution to ever-changing production requirements. Store multiple job profiles to make fast job changeovers without reprogramming. Integrated printer for printing shipping information right on the bag.

Rollbag R3200 Automatic Bagger

The R3200 Automatic Bagger is a large bag packaging system that uses coex mailer tubing or bags on a roll. When using coex mailer tubing, bags are formed in-line before they are printed, filled and sealed. Tubing reduces bag inventory requirements and significantly cuts material costs. The R3200's easy load bag opener creates a rectangular opening to more effectively pack large products. Next bag out printer functionality streamlines the bagging process and saves time.

Magnum Horizontal Fulfillment Bagger

The Magnum Horizontal Fulfillment Bagger meets the unique requirements of bagging large products horizontally. This bagger works with coex mailer tubing as well as bag on a roll. By using coex mailer tubing, save on material costs even further by right sizing your bag for the product being packed. The Magnum Horizontal features several configurations of label applicators to automatically apply the shipping label to the bag.

Bags on a roll, poly tubing and more

Key machine features:

- Easy to use operator interface
- Durable design for long-term reliability
- Database integration
- Next bag out printing
- Strong, attractive seals
- Simple job set-up and storage
- Easy maintenance and off-the-shelf components

Key bag and film features:

- Pre-opened bags on a roll & poly tubing
- Secure white/gray coex mailer material
- Custom, multi-color bag printing
- 15" max bag width

Services:

- Integration consulting and customization
- Product applications testing
- Installation and operator training
- Exceptional customer support
- Installation and operator training

Perfect for nearly every kind of apparel, PAC Machinery has more and better solutions for mail order fulfillment, e-commerce and multi-channel distribution.
